

A. Which Foods Drive Transport Emissions?

Left: share of CO2. Right: share of tonnage. If CO2 share > tonnage share, that commodity is carbon–intensive.

B. Where Does Each Metro's Food Come From?

Weighted food tonnage share by origin state (top 15 nationally). Darker = larger share.

C. How Sensitive Are Food Miles to Extreme Weights?

Weighted mean distance under progressive weight trimming. Stable lines = robust estimates. Large shifts = outlier–driven.
